

# Sqishoflage instructions

We can supply a vinyl sticker to help your sqish blend in with the surroundings.

We charge £35(inc VAT)+£5 for delivery for 3 bespoke matt finish stickers. One as is , one high tone and one dark tone, this usually allows for lighting & camera profile issues. If your installer is taking care of your sqishoflage requirements then he will charge extra for his services....

You can supply us with any picture of your choice, the image must be between 300 to 600 dpi resolution. Most digital cameras output high quality JPG images although we can accept most other high quality images too . Images need to be between 1 and 5mb for best quality.

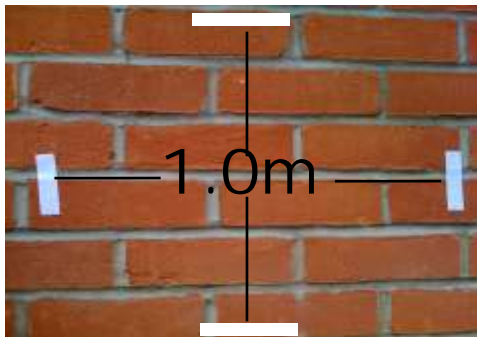

## Sqish siting

Siting the sqish will depend on the satellite being received. Assuming you are using the sqish to receive Sky channels via Astra 2 at 26E then the sqish will need to be sited facing South approx 30 degree East of South with approx 30 degree clearance from the horizon. If you are in any doubt then we recommend you call a local satellite engineer for his professional opinion.

## Taking your picture

Once you have a location for the sqish you can take your picture.

Clearly mark an area exactly 1000mm across and above and below on the area where the sqish will be installed or on a similar section of wall anywhere on the building. We will use these marks to scale the sticker so they must be accurate and clearly visible !!

Take a picture so the marks are just visible as shown. We suggest taking several pictures. Its virtually impossible to get an exact colour and brightness match so don't expect total perfection. We found that the general tone of the background was enough for the dish to blend in as you can see on our images. Images should be at least 1mb in size but no more than 5mb.

Smaller images may be poor quality and pixelated.

## Sending your picture

Assuming you are familiar with email and attachments you simply send your images to phil@sqish.co.uk. If your not sure how to send attachments and need help please call us on 01892 548468 (office hours & Saturdays till 5pm)

## Attaching your sticker

To make attaching the sticker easier wet the sqish and the sticky side of the sticker with a weak solution of water and washing up liquid, ideally using a mist spray gun. This will allow you to slide the sticker into position, then using a sponge or soft cloth carefully push any bubbles and water out.

*Leave to dry before installing the sqish.....*
